Conserving Water
By JT Le
April 13, 2015

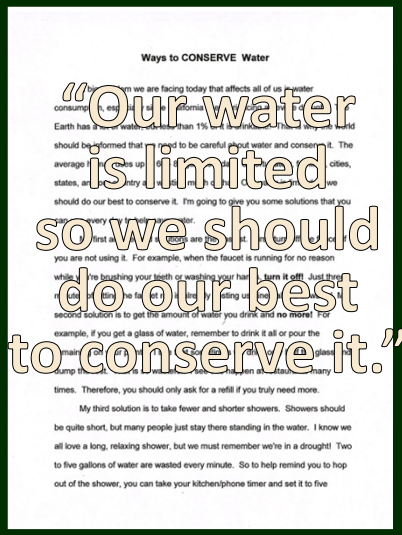
The warm water feels so good when I wash my hands, and sometimes I let the liquid run for two - three minutes. However, now that California is in a major drought, I will spend twenty [illegible] doing [illegible] instead of letting the water run for so long. California is running out of water because [illegible]

People use and waste water in many ways. When they brush their teeth, they turn the water on high and leave it running [illegible] seven minutes, draining the valuable [illegible] Maybe they should cut back in [illegible] by going to the beach and playing in the ocean if they want to play with water. Others [illegible] best way to use water. Maybe they should come up with another way to challenge one another instead of [illegible]

I have [illegible] I take 5-7 minute showers instead of spending 20 minutes. When I get tap water at the sink to drink, I always get just enough, not let the water run too long and overflow my cup. I also remind my dad to water the garden once a week and wash the car only when it's really, really dirty.

We have a serious water problem in California. There is so little water left in the reservoir that it's scary. That's why it's important that it takes everyone in every household to cut back and use less to save the precious little water that we have!

"I have learned to cut back in using water..."



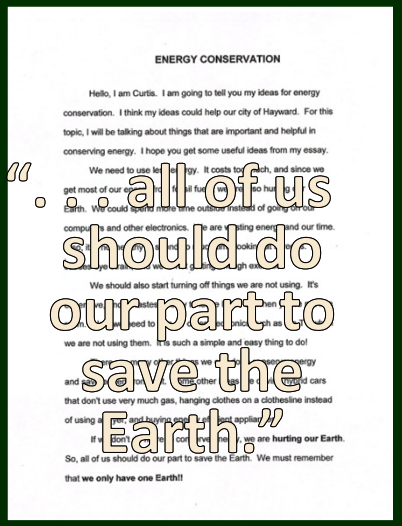
Ways to CONSERVE Water

[illegible] problem we are facing today that affects all of us is water consumption. [illegible] California. Earth has a lot of water, but less than 1% [illegible] should be informed that we need to be careful about water and conserve it. The average [illegible] uses up [illegible] cities, states, and country [illegible] should do our best to conserve it. I'm going to give you some solutions that you can [illegible] every day to help save water.

My first [illegible] ideas are [illegible] you are not using it. For example, when the faucet is running for no reason while [illegible] brushing your teeth or washing your hair, **turn it off!** Just think [illegible] second solution is to get the amount of water you drink and **no more!** For example, if you get a glass of water, remember to drink it all or pour the [illegible] times. Therefore, you should only ask for a refill if you truly need more.

My third solution is to take fewer and shorter showers. Showers should be quite short, but many people just stay there standing in the water. I know we all love a long, relaxing shower, but we must remember we're in a drought! Two to five gallons of water are wasted every minute. So to help remind you to hop out of the shower, you can take your kitchen/phone timer and set it to five

"Our water is limited so we should do our best to conserve it."



ENERGY CONSERVATION

Hello, I am Curtis. I am going to tell you my ideas for energy conservation. I think my ideas could help our city of Hayward. For this topic, I will be talking about things that are important and helpful in conserving energy. I hope you get some useful ideas from my essay.

We need to use less energy. It costs too much, and since we get most of our [illegible] Earth. We could spend more time outside instead of going on our computers and other electronics. We are wasting energy and our time.

We should also start turning off things we are not using. It's [illegible] we are not using them. It's such a simple and easy thing to do!

[illegible] and [illegible] other [illegible] that don't use very much gas, hanging clothes on a clothesline instead of using a [illegible]

If [illegible] we are **hurting our Earth.** So, all of us should do our part to save the Earth. We must remember that **we only have one Earth!!**

"... all of us should do our part to save the Earth."

Recycle

Do yo... important. ... should ... of trash.People should pick it up and th... have to recycle and help the comunity.

In addi... to pick up trash.Why sh... e reasons people should ... cleaner and not as dirty.

Also Do you know that we compost ... recycle 34.5% we have to try to ... type of recycleable trash.So ... recycleing, you will keep the world cry day.

However, alot of people see trash all over the place like the freeway, street, roads, brides, and more place . Now do you see way should we clean up trash or recycle more.The roads have more trash than ever.

In counclusion,People should recycle alot because you help the world, the place, and the comunity.People who help to compost or recycle we have 34.5%.Did you know that the roads and everwhere we go have trash and ,we see it so my idea is to clean it up. We need more people to clean up the world or place.So move your body, and pick up trash, and have fun doing it.

"People should recycle."

Water Conservation Throughout Our Nation

Water conservation is very important to the Hayward community and all communities all around the Bay Area and California. In this essay I will by addressing the importance of water conservation, how it affects our [illegible] as a whole, and explain what water conservation is. All of these [illegible] result [illegible] depending on how much we conserve now.

Conserving water is one of the biggest issues in America, we take the [illegible] conserved. Letting conservation, water recycling conservation. With only one percent of the Earths water available to human consumption, don't you think the world should start to conserve all [illegible] supply water for our civilization as a whole and [illegible] are increasing every year and the proven fact is that one out of five people in the world have no availability to clean water. In order to sustain our water [illegible] conserve [illegible]

Water conservation is the most cost effective and environmentally efficient way to reduce our demand for water. Water conservation matches our supply [illegible] popular [illegible] people [illegible] and hydrate, and the supplies in order to do so are becoming less and less because to this day we still use as much water as the people did back when there was a smaller population. Not only are we running out of water but so is wildlife, if we conserve water we are also conserving

"Conserving water is one of the biggest issues in America."

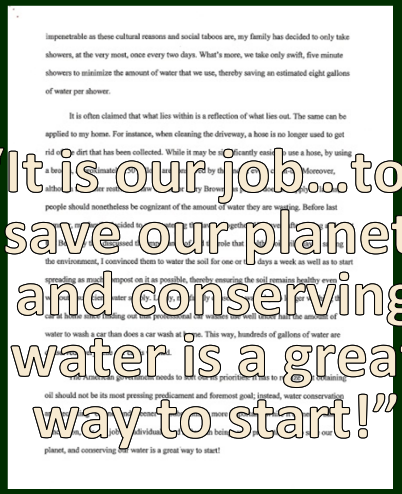
My walk to school

Walking to school everyday helps a lot the environment. For example my walks to school helps to save gas. Which also helps to save money for gas since the prices for it are going right back up. Now lets not also forget the fact that gas produces carbon dioxide. You see what carbon dioxide does is that it pollutes the air, which is [illegible] bad for us. It has damaging effects on living things and the environment [illegible] function [illegible]

You see carbon [illegible] not such a good thing. [illegible] sea rise related flooding, especially in big cities. Also farmers have gone to a point that they have become [illegible] deadly [illegible]

There's many [illegible] can make a [illegible] never too late to make a change. You can start by walking to school, work, and other places you need transportation for. We can all prevent this global warming if we work together. To make this a better place. It's all on us because part of the problem that our planet is the way it is, It's because of us. We don't see it but little by little we are killing the planet and all of us with it. Step up and make a change, let's stop polluting the air we breathe.

"...let's stop polluting the air we breathe."



impenetrable as these cultural reasons and social taboos are, my family has decided to only take showers, at the very most, once every two days. What's more, we take only swift, five minute showers to minimize the amount of water that we use, thereby saving an estimated eight gallons of water per shower.

It is often claimed that what lies within is a reflection of what lies out. The same can be applied to my home. For instance, when cleaning the driveway, a hose is no longer used to get rid of the dirt that has been collected. While it may be significantly easier to use a hose, by using a bro[illegible] estimated [illegible] by the [illegible] Moreover, although [illegible] Governor [illegible] Jerry Brown [illegible] people should nonetheless be cognizant of the amount of water they are wasting. Before last [illegible] the environment, I convinced them to water the soil for one or [illegible] days a week as well as to start [illegible] compost on it as possible, thereby ensuring the soil remains healthy. [illegible] water to wash a car than does a car wash at home. This way, hundreds of gallons of water are [illegible] oil should not be its most pressing predicament and foremost goal; instead, water conservation [illegible] planet, and conserving [illegible] water is a great way to start!

"It is our job...to save our planet, and conserving water is a great way to start!"
